

Upgrade Kits

Replace your coils in time

Protect your product sterility and production

JBT Food & Dairy Systems produces long lasting equipment than can hold for many years. During production the coils are wearing down by a combination of chemicals, heat, products and vibrations. After many years of running, the metal will get thinner and the coils require replacement. We do have add-ons for the SteriDeal to protect the machine against vibration. If you are your area customer care manager can tell you more about the dampeners.

Preventive checking

In the end our coils are very long-term wear parts. Therefore we advise our customers with a coil older than 8 years to do an annual check-up of his machine. The testing normally doesn't find anything in the first 20 years, but there are many factors that can influence the lifetime. This testing will reduce the chance to harmful surprises like downtime or loss of sterility.

Copy what you have

The coils in your machine have been designed specifically for your application. JBT has stored the production data to ensure we can reproduce what you have.

Unlimited lifetime of your machine

Are you happy with the current achievements of your line? Replacing the coils is replacing the heart of the machine. With this new coil the machine can run for many years again.
