

Tempest Enclosed Cab Weather Cover

Protect your Tempest deicer investment with our new Tempest Enclosed Cab Weather Cover

Our innovative Tempest enclosed cab provides great visibility when operating in demanding snow events. However, during the summer it can become a hot “greenhouse”, reaching temperatures of 180°F (82°C) or more that can cause damage to cab components – including the operator seat, plastic components, and sensitive electronic parts.

Our new Tempest Enclosed Cab Weather Cover can protect your investment from these harsh conditions.

The Tempest Enclosed Cab Weather Cover uses the best material available – a special heavyweight vinyl called Showtime S83 16oz Block-out, which is the preferred material for construction of permanent outdoor tents and pavilions. Its excellent UV ray blocking properties, superior abrasion resistance, and waterproof outer shell make it perfect for keeping out that harsh summer sun; customers report a 60° - 80°F (16° - 27°C) lower cabin temperature with the cover installed than without it in place. It's also great for winter use – by covering your enclosed cab when not in use, you prevent snow and ice accumulation – no need to clean ice from windshield wipers before winter operations!

The Tempest Enclosed Cab Weather Cover is easy to install and remove – and with strategically placed, heavy-duty zippers on all four vertical corners, accessing the cab while installed is fast and simple.

Your Tempest deicer represents a major asset for you – and the enclosed operator cab is a sizeable component of that investment. Protecting it from the elements during the off-season and during the deicing season off hours is a great way to keep your deicer operating at peak performance when you need it the most.
