

Upgrade for Servo cappers

Capper IPC Upgrade

PRoCARE®

The smart way to produce
more tonnage per day

jbt.com

JBT (formerly under the name of Stork) builds weight fillers for the Dairy industry. To keep the machines up to date we introduce a continuous improvement plan. This can involve:

- ✓ Maintenance improvements
- ✓ Accuracy improvement
- ✓ Program updates

This leaflet describes an upgrade for the Servo capper heads of the Ultra Clean filler as the capper IPC has become obsolete.

What's the problem?

The present ZALKIN brushless technology (CMB1) has become obsolete. This concerns the following components:

- ✓ The FESTO IPC
- ✓ The CMB1 drive of the capping for machines before 2006.

What is the new functionality?

The functionality will be the same but with up to date components

What will be modified?

- ✓ The Zalkin CMM1 IPC replaces the FESTO IPC.
- ✓ The CMB2 drives replaces the CMB1 drive when required (one per station).
- ✓ Profibus communication between filler PLC and capper brushless technology

What's the impact?

About two days will be required for the modification; one for the modification itself and one for testing. The exact time depends on the number of capping heads.

What are the benefits?

Up to date components resulting in less downtime caused by breakdowns and better and faster support from JBT when a breakdown occurs..

Please contact your JBT customer care manager for more information or a quote.
