

Upgrade Kits

PRoCARE® Performance

General information

John Bean Technologies Corporation (JBTC) is a leading supplier of integrated food processing solutions. From single machines to complete processing lines, we enhance value and capture quality, nutrition and taste in food products. Our experience has educated us on the influencers for performance and the requirements for maintenance. Recently JBT introduced iOPS® as a new product. iOPS® is a IIOT / Maintenance 4.0 solution specifically build for our industry and is helping us optimizing our customer returns.

Our machines are mostly placed in high performance areas that require the maximum they can bring. Unplanned interruptions of the process can result in significant loss of income.

JBTC can offer you a service contract with a solid plan for regular maintenance, support, monitoring, spares and shared spares all tracked and traced with customized Key Performance Indicators.

By implementing the iOPS® gateway into your infra structure, a highly secure solution is provided to monitor the KPI's and report them as an actual.

The contract is intended to be multiple years and is mainly focused on improving your OEE to the maximum result. Therefore the result will be:

- A constantly monitored system.
- An increase in availability and predictability of the system.
- An increase in production capacity.
- A reduction of cost for utilities and offsites.

If you are interested a performance contract, contact your Area Customer Care manager for more information.

Please contact your JBT Customer Care manager for more information.
