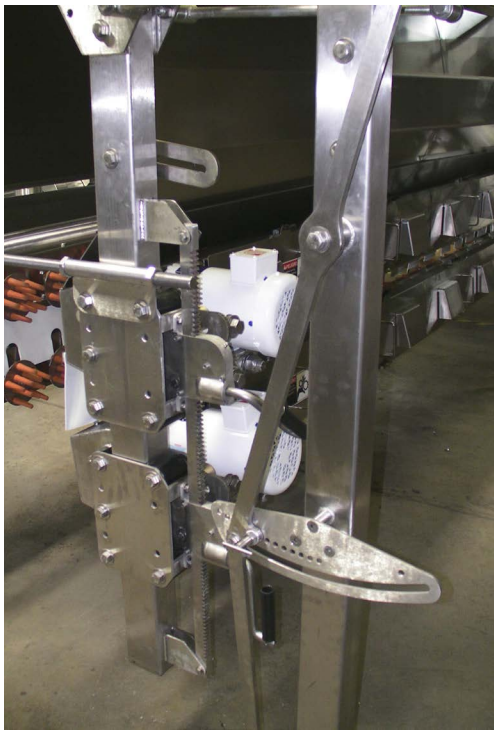
# ADJUSTABLE DISC PICKERS

Models: VB-64-M, VB-96-M

VB-64-M Model



Bank Height & Width Adjustment

The VB-Series Disc Picking Machines are specifically designed to provide complete bank adjustability in the final station of the picking operation. This allows processors to safely and accurately fine-tune picking action to focus on specific areas of the bird, where many other designs lead to costly damage in the form of skin tearing, bruising or broken wings.
