

Upgrade Kits

General information

JBT Food & Dairy Systems Amsterdam is globally providing high quality filling systems. These systems are known for their reliability and durability. The uptime of JBT SF&DS systems will provide our customers the competitive advantage over their competitors. It is our goal to improve this advantage in any way we can. Therefore we are always solving issues that result in loss of product, or loss of productivity.

What's the problem?

Providing basic training to new employees is critical for maintaining a proper operation. Improving the operator and maintenance knowledge level to an advanced state will be the only way to improve from status quo to a higher efficiency level. Normally training will be a combination of classroom and hands on training. The activities on a running or stopped machine are limited. The problem is that the majority of people learn by visual input and doing the work.

What is the new functionality?

JBT SF&DS has developed a portable standalone simulation system. This system can be prepared with any Beckhoff based control system. Therefore the trainer will simulate the current HMI on the laptops used by the trainees and specific situations can be simulated instead of practicing on the machine.

Using the system for training will add a standard fee to the training.

What are the benefits?

By using this system for training, the customer will gain:

- More effective training results
- Longer lasting knowledge level
- Less impact from training on production

Please contact your JBT Customer Care manager for more information.
